

Meeting Minutes								
Date & Time	Attendees	Agenda	Notes					
(3/26/24), 9:47-10:40	Kunal, Apple, Aye, Pierce	The team discussed the idea that we wanted to pursue and landed on making a shopping list web app. Created our proposal document and started to write out our functional requirements for our web application. CS 152 - Project Proposal Created a Group on Canvas for team members to join for easier assignment submission. Tentatively decided on Group name as "Cartier".	Will check with Professor next class to get approval on project complexity before submission.					
(05/03/24), 7:02-9:07	Kunal, Apple, Aye, Pierce	The team discussed the setting up of the project environment on each laptop and install all the required dependencies on each's computer. Discussed about the required modules and helped dissolve any errors that may have rised during the project initialization.						
(05/03/24), 9:30-10:41	Kunal, Apple, Aye, Pierce	Discussed about the database structure of the project and the exact SQL create table statements. Consulted on the web pages of the project and discussed about some of the frontend web design: Login Page, Create New List Page. Divided work among the team members and assigned backend and frontend tasks to members	Successfully finished setting up the dev environment on all the team members' laptop					
(05/05/24), 4:44-5:12	Kunal, Apple, Aye, Pierce	Made changes to the node modules and had to install new dependencies so the team discussed about these new dependencies that are required to run the project. New libraries were implemented for the backend database so discussed about how to utilize these new libraries						
(05/06/24), 3:30-5:20	Kunal, Apple	Discussed about importing axios and using it to post and get data from the database to implement Lists, Reviews and Shops. Discuss code about using API and storing userID data in sessions to implement user authentication. Divided backend tasks between Kunal and Apple to implement listTemplate, addItem, addReview and viewShops.
